# Why is there so much interest in feeding DDGS to swine?

- ◆ “New Generation” DDGS is high in digestible nutrients
- ◆ Economical partial replacement for:
  - corn
  - soybean meal
  - dicalcium phosphate
- ◆ Increasing production and supply
- ◆ Unique properties
  - reduce P excretion in manure
  - increase litter size weaned/sow
  - gut health benefits?

# **Maximum Inclusion Rates of “New Generation” DDGS in Swine Diets**

(Based Upon University of Minnesota Performance Trials)

- ◆ Nursery pigs (> 7 kg)
  - Up to 25 %
- ◆ Grow-finish pigs
  - Up to 20% (higher levels may reduce pork fat quality)
- ◆ Gestating sows
  - Up to 50%
- ◆ Lactating sows
  - Up to 20%

Assumptions: no mycotoxins

formulate on a digestible amino acid and available phosphorus basis

## **DDGS and Phytase are a Key Part of Manure Phosphorus Management**

- ◆ Adding 20% DDGS to a corn-soy diet and formulating on an available P basis
  - can reduce manure P by > 12%
- ◆ Adding phytase to a corn-soy diet
  - increases P bioavailability from 15% to > 45%
- ◆ Lowering dietary P, adding 20% DDGS & phytase
  - can reduce manure P excretion by 40 to 50%
